Lithium and rare earth exploration

Caylloma, Peru | Mining investment opportunity

Pampas Salinas, Arequipa | Referential landscape, not the concession | Diego Delso / CC BY-SA 4.0

500 ha	Li + REE	Exploration	US$100M
PROJECT AREA	TARGETS	PROJECT STAGE	ASKING PRICE

WHY THIS OPPORTUNITY MERITS A CLOSER LOOK

A critical-minerals exploration opportunity in smectite-bearing formations, combining a defined concession footprint with recorded lithium sampling and a staged technical development thesis.

Clay-hosted exploration thesis

Smectite and dolomite formations provide the geological setting for lithium exploration and additional rare earth element targets.

Multiple target themes

Lithium leads the analytical record; rare earth elements, scandium and carbonates broaden the exploration focus.

EXPLORATION EVIDENCE	RECORDED DETAIL
SAMPLE SET	20 samples
LITHIUM RANGE	27-1,314 ppm Li
GEOLOGICAL HOST	Smectite and dolomite formations

INVESTMENT PROFILE

Commercial structure

Sale, investment or strategic partnership discussions.

Development pathway

Progressive sampling, mineralogical characterization and target testing form a proposed exploration pathway.

Technical context

Individual sample assays are exploration measurements. They are not average deposit grades, mineral resources or reserves.

Our value proposition is centered on Operational Certainty : all assets under our management have been verified
We guarantee projects with clear and clean title, fully updated registrations in full legal compliance, and established social under strict standards.
