1,600 ha	Iron ore	Evaluation	US$15M
REPORTED AREA	FOCUS	PROJECT STAGE	ASKING PRICE / NEGOTIABLE

WHY THIS OPPORTUNITY MERITS A CLOSER LOOK

A two-concession iron ore opportunity with hematite and magnetite mineralization and historical geological, geophysical and assay work. The commercial proposal is a negotiated sale of the asset-holding vehicle.

Iron mineralization and technical record

Hematite and magnetite are identified in the geological interpretation. Historical studies, preliminary drilling and field documentation provide the technical basis for a focused project assessment.

Historical inventory context

A historical figure of 72 million metric tonnes was described as probable reserves. It remains a historical estimate and is not presented as a current reserve under a modern reporting standard.

EVIDENCE	DOCUMENTED DETAIL
CONCESSION PACKAGE	Two concessions; 1,600 ha
PRINCIPAL MINERALS	Hematite and magnetite
HISTORICAL RECORD	Geology, geophysics, assays and preliminary drilling

INVESTMENT PROFILE

Commercial structure

US$15 million, negotiable. The proposed transaction contemplates a transfer of 100% of the concession-holding company shares.

Development assessment

The historical file includes access works and stockpiled material. Assess geological targets, process response and the physical asset package as part of the investment scope.

Investor engagement

Request the English overview, historical studies, assay materials and concession file under NDA, then coordinate a technical and commercial evaluation.

Our value proposition is centered on Operational Certainty: all assets under our management have been verified. We guarantee projects with clear and clean title, fully updated registrations in full legal compliance, and established social under strict standards.
