SIU KIU IRON MINE PROJECT

Arequipa Region — High-Grade Iron Ore Opportunity in Southern Peru's Mining Corridor

CONCESSION SCALE	AVERAGE GRADE	MINERALIZATION	DISTRICT CONTEXT
1,600 Hectares	62% Fe (Up to 67% Fe)	Hematite & Magnetite	Tier 1 Mining Hub

STRATEGIC LOCATION & MINERAL ASSET SCALE

Strategically located in the Arequipa Region, near the border with Moquegua in southern Peru, this iron ore project, covering a substantial package of 1,600 hectares of mining concessions, represents an exceptional mining investment opportunity with significant value appreciation potential.

MINERALIZATION & HIGH-GRADE QUALITY

The asset is distinguished by its substantial hematite and magnetite mineralization, featuring historical high-grade iron content averaging 62% Fe, with values reaching up to 67% Fe. The project is supported by geological and geophysical studies, as well as previous access development work that validates its scale and potential.

> **World-Class Corridor & Infrastructure:** The project benefits from a privileged location within southern Peru's dynamic mining corridor, surrounded by world-class (Tier 1) operations and projects, while also offering excellent transportation routes to the Pacific coast, facilitating efficient access to key export ports.
