1,900 ha	Au / Ag	Mining / plant	US$25M
REPORTED AREA	FOCUS	PROJECT STAGE	ASKING PRICE

WHY THIS OPPORTUNITY MERITS A CLOSER LOOK

An integrated gold-silver mining and processing opportunity combining a historical operating footprint with 2025 geophysical and geological work. The investment case spans existing infrastructure and mapped exploration targets.

Mining and processing footprint

Historical activities include flotation and cyanidation processing, with an IGAC environmental instrument covering mining and beneficiation. These records describe a historical footprint.

Recent exploration evidence

A February 2025 drone magnetometry survey complements March 2025 mapping of five gold-silver mantos. Channel sampling provides localized analytical evidence for target assessment.

EVIDENCE	DOCUMENTED DETAIL
MINERALIZED MANTOS	Five structures; approximately 0.15-0.50 m thick
CHANNEL ASSAYS	Local values of 1-15 g/t Au; one 47.80 g/t Au result
FIELD DEVELOPMENT	About 130-138 m ramp advance in March 2025

INVESTMENT PROFILE

Commercial structure

US$25 million asking price for sale or investment. Rehabilitation, restart or expansion expenditure is separate from acquisition consideration.

Development pathway

Integrate geophysics, mapping and sampling with an assessment of the historical processing footprint and phased development options.

Technical context

The studies cover distinct project footprints. Local assays are not average grades; historical activities and ramp progress do not establish current production or plant capacity.

Our value proposition is centered on Operational Certainty: all assets under our management have been verified. We guarantee projects with clear and clean title, fully updated registrations in full legal compliance, and established social under strict standards.
